

iPhone Photography II

Instructor: Peggy Feerick

Email: pfeerick@gmu.edu

This two day/4-hour workshop serves as a continuum of the iPhone I workshop. Please take time before the class to be sure your ProCamera app is up to date. There are also two editing apps I will introduce you to; please download them before class.

Snapseed (free)

Lightroom Mobile App (free)

If you have an iPad, I recommend using it for your editing: it makes many procedures much easier.

SCHEDULE:

Day One: We will review the differences between the iPhone camera feature and ProCamera app. We will also delve into ProCamera's advanced controls, specifically, the camera modes (automatic, semi-automatic and manual), exposure bracketing, and the histogram feature. After a thorough understanding of these advanced features, the class will examine the advanced features of editing using the app Snapseed and its offerings. Details, Curves, Tonal Contrast and Healing vs. the editing offerings of the iPhone camera app and the ProCamera app. We will finish day one reviewing the class assignment for Sunday.

Day TWO: We will start with a Q & A session, followed with a continuum on material not covered and/or completed on Saturday and finish the day with a critique on your photographic assignment.
